

Okay, that's odd...

```
<x-component>
  <span slot="one">Light DOM: span 1</span>
  <span slot="two">Light DOM: span 2</span>
  <span slot="one">Light DOM: span 3</span>
  <span slot="two">Light DOM: span 4</span>
  <span>Light DOM: span 5</span>
</x-component>
```

```
1 ::slotted(*:first-child) {
2   color: red;
3 }
4 ::slotted(*:last-child) {
5   color: blue;
6 }
```

DEFAULT SLOT

Light DOM: span 5

SLOT ONE

Light DOM: span 1
Light DOM: span 3

SLOT TWO

Light DOM: span 2
Light DOM: span 4

```
1 ::slotted([slot="one"]:first-child) {
2   text-decoration: underline orange;
3 }
4 ::slotted([slot="one"]:last-child) {
5   text-decoration: underline yellow;
6 }
```

```
1 ::slotted([slot="two"]:first-child) {
2   text-decoration: underline green;
3 }
4 ::slotted([slot="two"]:last-child) {
5   text-decoration: underline purple;
6 }
```

Parts

A way to open up sections of the shadow DOM for external customization.

Allows authors to apply any CSS they wish to shadow elements.
