

# Parts

---

A way to open up sections of the shadow DOM for external customization.

Allows authors to apply any CSS they wish to shadow elements.

# Parts

```
protected override render(): TemplateResult {
    return html`
        <div
            class=${classMap({ scroll: this.enableTabsScroll })}
            aria-label=${ifDefined(this.label ? this.label : undefined)}
            @click=${this.onClick}
            @keydown=${this.onKeyDown}
            @scroll=${this.onTabsScroll}
            id="list"
            role="tablist"
            part="tablist"
        >
            <slot @slotchange=${this.onSlotChange}></slot>
            <div
                id="selection-indicator"
                class=${ifDefined(
                    this.shouldAnimate ? undefined : 'first-position'
                )}
                style=${this.selectionIndicatorStyle}
                role="presentation"
            ></div>
        </div>
        <slot name="tab-panel" @slotchange=${this.managePanels}></slot>
    `;
}
```
